

Atwe

The Complete Product Book

The whole of Atwe in one volume — what it is, how it is designed, every feature it ships today, and everything it becomes over the next two years. [Home](#) · [Beam](#) · [Engine](#) · [Atwe AI](#) · [Profile](#).

[Vision](#)[Design system](#)[Feature universe](#)[Built today](#)[Roadmap 1–2 yrs](#)[Advisor's brainstorm](#)

Prepared for Yiddi · ATWE INC · July 2026 · Confidential

[atwe.com](#) · [ceo@atwe.com](#) · [team@atwe.com](#) · [support@atwe.com](#) · [alerts@atwe.com](#)

One volume. The whole product.

Atwe has grown into one of the most complete business platforms ever assembled by a small team — a network, a messenger, a marketplace, a jobs board, a wallet, and an AI assistant, all under one roof and one design language. This book is its single source of truth: written for the founder, for future teammates, for advisors and partners — anyone who needs to understand Atwe completely.

What it synthesizes

The live codebase

The shipped product at atwe.com — every route, table and screen — plus the admin console and the native iOS app now in build.

The Design Blueprint (Complete Edition)

The normative UX/UI specification — five laws, tokens, components, motion, 18 measured screens.

The Complete Product & Feature Audit

An enterprise audit of 425 competitor-benchmarked features against the code: 188 complete · 30 different · 82 partial · 107 missing · 18 N/A.

The Competitor Playbook + iOS Build Plan

The 13-platform, ~425-item competitive checklist, and the phased architecture for the native app — plus the founder's full vision from months of working sessions.

How to read it

- **Part 1 — What Atwe Is.** The vision, the positioning, the five worlds, who it serves, how it earns.
- **Part 2 — The Design.** The complete design system that makes hundreds of features feel like one product.
- **Part 3 — The Five Worlds.** A guided tour of the product, world by world, with screens.
- **Part 4 — Built Today.** The full inventory of everything already shipping. This is the coverage proof.
- **Part 5 — The Road Ahead.** Every feature planned or wanted for the next 1–2 years, prioritized and sized — ending with numbered blank lines for your own ideas.
- **Part 6 — The Advisor's Brainstorm.** Strategic recommendations and fresh ideas beyond the lists.

A living document. Products move. Treat Part 4 as true at print time (July 2026), Part 5 as direction rather than promise, and revisit both at each launch cycle — the same discipline as the audits this book absorbs.

Table of contents

Part 1 — What Atwe Is

1.1	The idea	
1.2	Not social media — a business platform	
1.3	The five worlds	
1.4	Who Atwe serves	
1.5	The platform today	
1.6	How Atwe earns	

Part 2 — The Design

2.1	The five laws	
2.2	Color — the token system	
2.3	Type, space, shape, icons	
2.4	The component library	
2.5	Motion — the Living Light	
2.6	Navigation & structure	
2.7	States, gestures & haptics	
2.8	Accessibility & languages	
2.9	The native iOS app	
2.10	Desktop	

Part 3 — The Five Worlds

3.1	Home — the pulse	
3.2	Beam — every conversation	
3.3	Engine — discovery of the world	
3.4	Atwe AI — the assistant	
3.5	Profile — everything yours	
3.6	The platform beneath	

Part 4 — Built Today

4.0	The state of the product	
4.1	Complete inventory — 24 categories, 230+ features	

Part 5 — The Road Ahead (1–2 years)

5.0	How to read the roadmap	
5.1	The iOS & Android apps	
5.2	Messaging · Content · Creators	
5.3	Commerce · Jobs · CRM	
5.4	Atwe AI next level	
5.5	Calls · Groups · Platform · Trust · Growth	
5.6	Your ideas — numbered blank lines	
5.7	Deliberately not building — and why	
5.8	The verification sweep — final additions	

Part 6 — The Advisor's Brainstorm

6.1	The strategic read	
6.2	Five moats to press	
6.3	The launch playbook	
6.4	Fresh ideas beyond the lists	
6.5	Risks to manage honestly	

Part 7 — Running the Company

7.1	Legal & compliance	
7.2	Pricing & unit economics	
7.3	Launch geography	
7.4	The member-support system	
7.5	Reliability — backups & incidents	
7.6	Growth operations — SEO & the first hires	

Appendix

A	The numbers	
B	Technology at a glance	
C	Contact	

Tip. If you read only three parts: 1 (what it is), 4 (what's real today), 5 (what happens next).

01

What Atwe Is

The idea, the positioning, the five worlds, the people it serves, and how it earns. Everything else in this book hangs off this part.

The idea

Atwe is the place where business gets done. One app where a business — from a one-person shop to a growing company — can exist publicly, talk to customers and partners, hire, sell, get paid, stay organized, and put a serious AI to work. Not eleven subscriptions and eleven logins. One platform, one identity, one design.

The world it enters

Today a small business lives fractured: posting on one network, messaging customers on another, selling through a store platform, hiring on a jobs site, invoicing from an accounting tool, and asking an AI that knows nothing about any of it. Every seam loses time, data and money. The tools are excellent alone and disconnected together.

The Atwe answer

One identity

An account is a person or a business. A business IS its page, its store, its inbox and its employer profile — no duplicates to maintain.

One graph

Followers, connections, customers, applicants and buyers are the same people in the same place — every feature strengthens the others.

One wallet

Money moves inside the platform — payments, escrow, invoices, payouts — so trust and commerce compound instead of leaking out.

The compounding loop. A post attracts a customer → the customer chats in Beam → the chat becomes an order held safely in escrow → the order becomes a review → the review wins the next customer — and Atwe AI drafts, summarizes, ranks and automates at every step. Each world feeds the next. That loop is the product.

In one sentence

The central place where businesses communicate, network, manage operations, hire, sell, collaborate — and use AI that actually does things.

Not social media — a business platform

Atwe borrows the best mechanics of the great networks — feeds, profiles, messaging — but its purpose is different, and the difference disciplines every decision in this book.

SOCIAL MEDIA OPTIMIZES FOR...	ATWE OPTIMIZES FOR...
Time spent, outrage, infinite entertainment	Business outcomes: a sale made, a role filled, a customer answered, an invoice paid
Anonymous virality	Accountable identity — verification, reviews, a trust score that follows real behavior
Advertising as the only economy	A real economy: escrow-protected commerce, subscriptions, invoices, a wallet — ads are one stream, not the point
An algorithm that hides your audience	Channels, circles and chats that reach the people who chose you

The positioning line

“LinkedIn is where you look for work. WhatsApp is where you talk. Shopify is where you sell. **Atwe is where you do all of it — with an AI that runs alongside you.**”

What Atwe deliberately is not

- **Not an entertainment feed.** Reels and stories exist to market businesses, not to farm attention.
- **Not anonymous.** Handles are real identities with reputations; moderation and appeals are first-class.
- **Not a walled ad machine.** The For You feed is tunable, measured, and honest about promotion (“Ad” labels).
- **Not a copy.** The audit in Part 4 shows Atwe already ahead of each rival in their own home category somewhere — escrow beyond eBay’s, messaging commerce beyond WhatsApp’s, an AI benchmark none of them meet yet.

Why this matters for design. A business product must feel calm, premium and trustworthy. That is why the Design Blueprint (Part 2) bans decoration, restricts color to meaning, and reserves motion for truth — “light only moves when something true is happening.”

The five worlds

Everything in Atwe lives in exactly five places — five tabs, five mental rooms. A member can hold the whole product in one hand.

WORLD	IT IS...	WHAT LIVES THERE
HOME	The pulse	For You & Following feeds · industry Circles · Collections · stories · posts, polls, reels, quotes · composer · notifications.
BEAM	Every conversation	Chats (multi-thread) · groups · communities · channels · broadcast · voice notes · calls & call links · contacts · the business inbox.
ENGINE	Discovery of the world	Universal search · marketplace · jobs · services · businesses · events · courses · trending · near-you. Nothing personal, ever.
ATWE AI	The assistant	Business-grounded chat · summaries · drafting · matchmaking · do-it-for-me actions behind confirm sheets.
PROFILE	Everything yours	Identity · wallet · storefront management · network & hiring tools · library · planning · settings — ~35 personal surfaces in one calm hub.

The discipline that keeps it clean: Engine stays pure discovery (no “my-anything”), Profile holds everything personal, and each world keeps its own navigation stack — so a member never gets lost inside a platform this large.

Home — For You · product-tagged post · white FAB

Beam — Chats — search · unread badges · swipe actions

Who Atwe serves

Four people, one platform. Each arrives for one job and stays because the worlds connect.

The business owner — “Sarah, bakery owner”

Arrives to **be findable**: a verified business profile with hours, photos, reviews and a storefront. Stays because the same app answers customers (Beam + auto-replies), takes escrow-protected orders, recovers abandoned carts, runs promotions, books appointments with deposits, hires staff, and pays out to her bank. Atwe AI writes her product descriptions and answers her Q&A.

The professional — “Daniel, project manager”

Arrives to **network and grow**: a serious profile with skills, endorsements, recommendations and experience. Follows his industry circle, posts insight, builds connections. When it's time to move, the jobs world knows him: Easy Apply with his AI-built resume, “how you match” scoring, salary insight and interview prep.

The independent worker — “Maria, electrician”

Arrives for **work**: an open-to-work listing, a services card in local discovery, bookable slots. Quotes jobs in chat (quote → invoice → paid), gets paid into her wallet instantly, collects reviews that raise her trust score, and lets Atwe AI draft every estimate and follow-up.

The creator & educator — “Eli, business coach”

Arrives to **monetize an audience**: newsletters, courses, subscriber-only posts, tiers, tips and paid events — all settled in the wallet. His storefront sells templates; affiliate links let others sell for him; analytics show exactly what works.

The network effect by design. Sarah hires Maria through jobs; Daniel finds Sarah's bakery in local search; Eli teaches all three. Every persona is another persona's customer — that's why one platform beats four tools.

The platform today

Atwe is not a deck — it is live software at atwe.com, feature-complete across its planned roadmap and audited end-to-end for launch.

The three surfaces

The web app (live)

A fast, installable PWA — the full five-world product with Black & Light themes, 14 languages with RTL, and offline resilience.

The admin console (live)

A separate operations dashboard: users & staff RBAC, revenue & finance reconciliation, moderation + AI scanning, disputes, refunds, growth & traffic analytics, feature flags, audit log.

The native iOS app (in build)

Expo/TypeScript, verified on-device: five-world navigation, secure login against production, native Home feed. Phases 1–7 → TestFlight → App Store; Android from the same code.

Hard proof points

- **425 competitor-benchmarked features audited** against the code: **188 complete, 30 shipped-differently** (51% of the union of 12 platforms' headline features), 82 partial, 107 missing, 18 N/A — each one catalogued in Parts 4–5.
- **Money is engineering-grade:** zero-sum ledger, idempotent webhooks, claim-before-charge, velocity caps, wallet freeze — covered by an automated test suite for the critical money/auth flows.
- **Category coverage vs. the reference platform:** Google Business Profile 71% · WhatsApp 69% · Telegram 59% · TikTok 56% · X 55% · LinkedIn 52% — while also holding features none of them have together (escrow, quotes → invoices, group clouds, an acting AI).
- **Design coverage:** a normative blueprint (Part 2) with a 12-point “definition of done” — tokens-only color, one white primary per screen, designed empty/loading/error/offline states everywhere.

Launch posture (July 2026). Friends-and-family live now; public opening within weeks — demo mode off, SMTP verified, then the iOS TestFlight ring. The book you are holding is the map for everything after that.

How Atwe earns

Five revenue streams are already built into the product — recorded in a company-revenue ledger with an admin dashboard. None of them require selling members' data.

STREAM	WHAT IT IS	STATUS
Atwe Pro	The membership tier — today it lifts limits (job posts, AI tokens); v2 rebuilds it around who-viewed, deep analytics, AI capacity and badges.	LIVE · V2 PLANNED
Advertising	Promoted posts, boosted jobs, sponsored display campaigns with admin review, and a real CPC second-price auction for sponsored listings.	LIVE
Commerce services	The escrow/checkout rails, shipping labels, and — later — payment processing margin and premium storefront tooling.	RAILS LIVE
Creator & content fees	Paid subscriptions, tiers, PPV, paid newsletters, event tickets, courses — platform share at scale.	LIVE (NO FEE YET)
Premium identity	The reserved-handle marketplace (self-serve paid claims of premium @names) and future verified-organization tiers.	LIVE

Advisor's note (expanded in Part 6): sequence monetization deliberately — trust first (free, generous), then Pro v2 and ads once the network is alive, then commerce fees once volume is real. Charging too early is the classic marketplace mistake.

Wallet — white Send · green only for money in

Listing — escrow chip above the fold · white Buy now + grey Add to cart

02

The Design

The complete design system — the five laws, the tokens, the components, the Living Light, and the platform behaviors that make hundreds of features feel like one finished product. Source: the Design Blueprint, Complete Edition (normative).

The five laws

Every screen in Atwe obeys five laws. When any two documents disagree, the laws win.

LAW	MEANING IN PRACTICE
1 · Black is the product	Pure #000000 background everywhere. Surfaces are near-black, separated by light and hairlines — never borders or shadows.
2 · White acts, blue identifies	The ONE primary action per screen is a white pill. Blue marks what something IS — active, selected, verified, link, AI — it never competes to be the action. Green/red/yellow are meanings, not decoration. Gold rating stars are the single approved exception.
3 · Light, not color	Delight comes from moving light — cursor pool, bulb rim, opening lap, AI comets — never gradients, illustrations or extra hues. The wallet card keeps its one approved blue gradient.
4 · X skeleton, Apple polish	Layouts follow X's proven structure (feeds, posts, word tabs, floating nav). Finish follows Apple: type discipline, hairlines, springs, restraint.
5 · AI announces itself	Comets and shimmer appear ONLY while Atwe AI is actually working. Motion is meaning; decoration is banned.

The closing sentence of the Blueprint, worth keeping whole: “A black stage, white that acts, one blue that identifies, and light that only moves when something true is happening. Build exactly this and Atwe stops looking like features assembled — it becomes the finished thing they were waiting for.”

Where the laws came from

They are the distillation of a year of iteration on the live product — the purge of rogue colors, the retirement of the old blue buttons, the removal of the third “Dim” theme — captured as one enforceable specification with a grep-clean, tokens-only definition of done.

Color — the token system

Two themes ship: **Black** (flagship) and **Light**. Components reference tokens only — never hex — so the whole app retunes from one table. These are the exact locked values.

--bg #000000 App background (Black)	--card #0B0B0D Cards, rows, sheets	--elev #141416 Inputs, chips, secondary	--text / --primary #FFFFFF Text · THE action fill	--text-2 #8E8E93 Secondary text
--blue #0A84FF Identity: links, active, verified, AI	--green #30D158 Money in · success · escrow-safe	--red #FF453A Destructive · errors	--yellow #FFCC00 Warnings only — never errors	--blue-tint #DBE9FF Selected fills 8–12%
--on-primary #1D1D1F Label on white primary	hairline (Light) #E5E5EA 0.5px separators			

The button ladder

WHITE primary (one per screen, no edge) → **grey-glass secondary** (elev + 0.5px hairline) → **blue text actions** (links, tertiary) → **semantic fills** only when the action IS the meaning (Accept green / Delete red / Warning yellow) → **disabled at 40%**, no light. Two filled buttons side by side are never both loud: Buy now (white) + Add to cart (grey).

Hard bans: #0ea5e9 and all legacy teal/purple/rainbow values, colored avatar palettes, and any gradient except the wallet card and the light ramps.
The verified seal is **neutral silver — never blue**.

Type, space, shape, icons

Apple's type discipline on X's skeleton: a six-rung scale, a 4-point grid, three radii families, one icon language.

Type scale (Inter)

ROLE	SPEC	USED FOR
Display	32 / 800 / -0.04em	Wallet balance, prices, hero numbers
Title	22 / 700 / -0.02em	Screen & sheet titles
Headline	17 / 600	Card titles, names, section heads
Body	15 / 400 / 1.5	Posts, messages, descriptions
Caption	13 / 400	Timestamps, meta, helper text
Micro	11 / 500 / caps	Badges, group labels, ticks

Space, radius, touch

SYSTEM	VALUES
Spacing	4pt base: 4·8·12·16·20·24·32·48 — screen gutter 16, card padding 16, section gap 24
Radii	Inputs & chips 12 · cards 20 · sheets 28 top · pills & buttons 999 · post media 16
Hairline	0.5px, inset 16 in lists — the only border that exists
Touch	44pt minimum · nav items 49pt · rows 52–72pt
Icons	Outline only, 1.5px stroke; 24pt bars, 18pt engagement; filled ONLY when active/on

The verified seal — one badge, everywhere

A single silver/white seal (never blue) rendered at 90% of the name's own font size, sitting on the text baseline like a character — in feeds, profiles, messages, notifications, search. Businesses carry the same seal in a rounded-square form, and their avatars render app-shaped — the one visual tell that separates a business from a person at any size.

Why so strict? A platform with this many features survives visually only through repetition: one scale, one grid, one seal, one ladder. The strictness IS the brand.

The component library

Every screen is assembled from the same small kit. If a new feature needs a new component, the component joins the library first.

COMPONENT	SPECIFICATION
Primary button	WHITE fill, #1D1D1F label 17/600, no edge, radius 999, height 50 (sheets) / 44 (inline). Exactly one per screen. Light theme: #111114 fill, white label.
Secondary	Elev glass, 0.5px hairline, white label.
Semantic	Green Accept / red Delete / yellow Warning fills only when the action IS the meaning.
Input	Elev, radius 12, height 50; focus = blue hairline + 35% outer glow.
Card / sheet	Card radius 20 / sheet 28 top, grab handle 36×5, spring 320ms, backdrop black 45% + blur 20. No borders — light is the edge.
List row	52pt settings / 72pt conversations; icon disc 28 blue-tint or avatar 40–48; chevron tertiary.
Word tabs	17/600; active white, inactive secondary; no pills or underlines — weight carries state.
Floating nav	Five worlds in a pill bar, blur 30; active is BLUE (filled glyph + label).
Badge	Blue disc, Micro white count (dot at 1). Never red — red means error, not attention.
Avatar	Circle 24–96; placeholder = elev + initial in blue-tint; story ring 2px blue; business = app-shape.
Menus (…)	One frosted material app-wide, capped height with internal scroll, label-left icon-right rows, glide-to-select on touch.

Composer — tag product · audience · reply controls · white Post

Post detail — edited label · full action row · docked reply

Motion — the Living Light

Atwe's signature. Not gradients, not confetti — a single system of moving light with five layers, each tied to a true event.

LAYER	TRIGGER	BEHAVIOR — EXACT VALUES
A · Cursor pool	Pointer on the stage	Radial glow follows the cursor — ~12% peak, 420px radius, 120ms ease-out. Touch: under the finger during drag only.
B · Bulb rim	Pointer near a surface	2.5px ring hugs the rounded edge: sharp white → ice core + blurred blue halo on an identical path. Invisible at rest; melts ~3.5s after leave; scroll does NOTHING.
C · Opening lap	Boot, login, first open of each tab (once per screen per session)	~2.5 decelerating laps in ~3.6s, cubic-bezier(.2,.8,.2,1), then melt.
D · Button flares	Hover / press / disabled	White primary: hover brightness .97 + rim hint; press .92 + scale .97 (spring 300/24). Disabled 40%, no light.
E · AI comets	ONLY while Atwe AI works	2–3 comets orbit the answer container ~160px/s: thinking → streaming → one final lap → gone. Light theme: travelling blue shimmer. No AI = no comets.

Engineering rules

- **Reduced motion:** laps/comets become a 600ms static soft-glow fade; pool/rim render at final state.
- **Durations:** tap 120ms · standard 240ms · sheet 320ms spring(300,30) · lap 3600ms · melt 3500ms.
- **Performance:** one fixed pointer-events:none glow layer; rims are masked pseudo-elements; zero scroll listeners.

The rule that protects it all: if the light is moving, something true is happening — a first arrival, a press, an AI actually working. The moment light becomes decoration, it stops meaning anything.

Navigation & structure

Five tabs, honest stacks, and tasks that rise as sheets — the model that keeps a platform of this size legible.

PATTERN	RULE
Tabs	Switch worlds; each keeps its own stack + scroll position; first open per session fires the opening lap.
Push	Drill-downs push onto the back stack (cap 50) with scroll recorded; Back restores exactly.
Sheets	Tasks rise as sheets — composer, checkout, filters, intros; back/scrim/drag dismisses the sheet first.
Back order	overlay → sheet → stack → tab root → double-back-to-exit.
Deep links	/@handle · /post/:id · /job/:id · /listing/:id · tab roots /home /beam /engine /ai /profile — legacy aliases 301 into the worlds. Shared links unfurl with rich OG cards.
Not-found	Honest empty state + "Back to Home" — never a fake network error.

States playbook — every screen, four states designed

STATE	PATTERN
Empty	Glyph in an elev disc + Title + one Caption + ONE white pill that creates the first thing. Empty states teach, never apologize.
Loading	Skeleton bars pulsing 1.2s in the final layout; spinners only inside working buttons.
Error	Honest Title + Caption + grey Try again; definitive 404/403 route to Not-found — never fake network blame.
Offline	Hairline banner "You're offline — showing what we have"; queued sends show a clock tick and auto-retry.

Success has a signature too: a green check pulse (400ms) + haptic; money-in adds the green ledger line. Green is reserved for money-in and safety — which is exactly why it feels like relief.

Gestures & haptics

Touch behavior is specified, not improvised — the physical feel of Atwe.

Gestures

GESTURE	WHERE → RESULT
Edge swipe right	Pushed screens → back (restores scroll)
Pull down	Feeds/lists → refresh, one quick top-edge light sweep as the ack
Row swipes	Beam list → mute/pin left, archive right; iMessage-grade reveal physics with commit haptics
Long-press	Posts, messages, listings → blur backdrop + context card; reactions on messages; glide-to-select menus
Double-tap	Post media → like; blue heart pulse from the tap point
Hold mic	Chat input → record; slide up locks, left cancels

Haptic vocabulary

HAPTIC	FIRES ON
Light	Tab change, toggles, chips
Medium	Send, post, refresh catch
Success ×2	Payment sent, order placed, application submitted
Warning	Destructive confirm sheets

Scroll hygiene (from the live app): passive listeners, axis-locked surfaces, lazy in-list media, finger-tracked bar choreography, and a DOM-bounded infinite feed — the fixes that made iOS stop reloading the app under heavy scrolling.

Conversation — blue outgoing · voice transcript · edited · read ticks

Accessibility & languages

A business platform is used by everyone or it isn't a platform. These are requirements, not aspirations — and most are already live.

AREA	REQUIREMENT (AND STATUS)
Contrast	White on black 21:1 · secondary 5.9:1 AA · white primary label 16.9:1 · blue on black 6.0:1; Light-theme body links use the darker #0064D2. Never color alone — money-in also shows “+”. WCAG-audited live.
Touch & type	44pt targets everywhere; dynamic type to 130% without truncating names below 60%. Larger-text mode ships today.
Reduced motion	Laps/comets → static glow fades; springs lose overshoot. A full prefers-reduced-motion reset is live.
Screen readers	Icon-only controls labeled; posts read name → time → content → counts; live announcer voices toasts, calls, AI replies; comets are aria-hidden with a “thinking” status region.
RTL	Full mirroring — nav, chevrons, bubbles, back gesture. Hebrew & Arabic first-class.
Languages	14-language UI framework live (en · es · fr · de · pt · it · ru · tr · hi · zh · ja · ko · ar · he) with English-key fallback — plus AI translation of posts and messages on demand.

Why it's strategic, not charity: small-business owners skew multilingual and mobile-first. The audit's cross-platform section scored Atwe 73% on quality-of-life/accessibility — higher than any single competitor category — keep that lead.

The native iOS app

Not a website in a wrapper — a true native body for the same five worlds, sharing the backend 100%. The foundation is already running on a real iPhone against production.

The decisions (locked)

- **Expo + TypeScript + Expo Router** — one codebase → iOS AND Android; native stacks, edge-swipe back, typed routes; cloud builds (no Mac in the loop).
- **Design tokens ported 1:1** — the exact palette, the white-primary ladder, the silver seal; system-aware Black/Light.
- **TanStack Query + SSE** — cached server state with the live realtime stream updating it in place; offline read-cache with idempotent queued sends.
- **Keychain security** — token in the Secure Enclave store, Face-ID app lock, global 401 handling.
- **iOS materials where they earn it** — blur tab bar, native sheets, haptic vocabulary, Dynamic Type; Liquid-Glass restraint, not decoration.

Already verified on device

- Five-world tab navigation + theming + real login (2FA-aware) against the live backend.
- The native Home feed: X-anatomy cards, working likes with haptics, locked/promoted states, pull-to-refresh.

The seven phases

PHASE	SHIPS
0 ✓	Foundation — tokens, auth, nav, native feed (done)
1	Core shell & account — onboarding, settings, deep links, push
2	Home — full feed, stories, composer, detail
3	Beam — chats, groups, then calls
4	Engine — search, marketplace, jobs, services
5	Atwe AI — assistant + confirm-card actions
6	Profile & money — hub, wallet, storefront
7	App Store — HIG/VoiceOver audit, Apple Pay, TestFlight → public

Distribution: Apple Developer enrollment submitted (business Apple ID, Individual → upgrade to ATWE INC before public launch).
TestFlight cuts the Mac cord; Android follows from the same code.

Desktop

The same product, given room: a left world-rail, a centered feed, contextual discovery on the right — and Beam opens into a true two-pane messenger. Business users live at desks; Atwe respects that.

Desktop — Home — three-column X-skeleton: rail · feed · discovery

Desktop — Beam two-pane — conversation list beside the open thread

03

The Five Worlds

A guided tour of the product as a member lives it — world by world, screen by screen. Part 4 then lists every feature exhaustively; this part shows how they feel together.

Home — the pulse

The business feed. For You is ranked and personal; Following is chronological and loyal; Circles are the differentiator — 200+ industry feeds a member joins like neighborhoods and can pin as their own tabs. Collections holds everything saved.

What makes it Atwe

- **An honest algorithm:** personalization from interests, followed tags, engaged authors and dwell — with “Not interested,” muted words, seen-suppression, exploration slots for new voices, and admin-tunable weights measured by real engagement lift.
- **Business-native posts:** product tags that open a quick-buy sheet, promoted posts labeled “Ad,” polls, threads, reels, stories with close-friends audiences — every format in service of commerce and reach.
- **Creation with judgment:** a composer with AI assist, alt-text (hand or AI), reply controls, audiences, scheduling, drafts — and a 10-second undo after posting.
- **Circles instead of chaos:** official industry circles only — no user-made noise — so “Construction” or “Food & Beverage” reads like an industry newspaper.

Design law on this surface: the one white action is the composer FAB; like/repost fill blue on touch; the “New posts” pill is blue because it identifies (status), not acts.

Circles — 200+ industry feeds · white Join

Beam — every conversation

Messaging is where business actually happens, so Beam is built to WhatsApp-and-beyond grade: chats, groups, communities, channels, broadcast, calls — plus the commerce and automation layers none of the messengers have.

Beam — Calls — call links · silence unknown · recents

What makes it Atwe

- **Message powers at parity or ahead:** reactions, edits, delete-for-everyone, pins, stars, replies, forwards, disappearing timers, view-once media, locked chats, scheduled sends, voice notes with automatic AI transcripts, full message search.
- **Multiple threads per person** — email-style conversations under one contact; nobody else has this.
- **The business inbox:** labels, quick replies, greeting & away auto-messages that respect business hours, and the cart-recovery nudge that wins abandoned checkouts back — inside the chat where the customer already is.
- **Commerce in the thread:** products, orders, invoices, quotes, offers, money, splits, pools, gift cards — every card server-built and tappable.
- **Group Cloud:** each group's shared drive — files, notes, sheets, assignable checklists (AI-generated if you like), forms, schedules/rotas, rosters, expense logs. A small company can run its operations inside one group.
- **Calls that respect you:** voice/video, group calls, shareable call links, screen share, and silence-unknown-callers with an honest log.

Engine — discovery of the world

One search across everything; one DISCOVER grid into the marketplaces; trending and near-you for serendipity. Engine stays ruthlessly pure: nothing personal lives here.

What makes it Atwe

- **Universal search with scopes-after-typing** — people, businesses, products, jobs, services, posts, groups — plus X-grade post operators (from:, has:, since:, min_likes:).
- **A real marketplace:** Best-Match ranking (relevance × quality × sales velocity × recency × seller trust), a genuine CPC second-price auction for sponsored listings, filters, wishlists with price-drop and restock alerts.
- **Work, both sides:** the jobs hub with Easy Apply and AI match; the workers board with rates and availability; salary insight; referral asks through your own connections.
- **Local gravity:** the business directory, services, and the near-me layer — distance-ranked without ever needing an external map.
- **Events & learning:** ticketed events with capacity and ICS export; courses with modules, enrollment and progress.
- **The Ask-Atwe-AI hero** — the one blue card on the front page, because AI is identity.

The trust thread through all of it: every listing carries the green escrow chip above the fold. Discovery sells; protection closes.

Engine — hero search · Ask Atwe AI · DISCOVER · trending · near you

Engine — the commerce surfaces

Search results — scopes appear after typing · white Book pill · gold stars

Jobs hub — filter chips · white Easy apply · AI match

Business storefront — Shop tab · white Follow · escrow reinsurance

Checkout — Pay with Wallet · escrow note · white Pay

Atwe AI — the assistant

Most platforms bolt on a chatbot. Atwe's assistant is woven through every world — and it acts, always behind a confirmation card, always through your own authenticated permissions.

Atwe AI — comets orbit while it works · action chips · confirm sheets

Where it already works for you

- **Writing, everywhere:** improve/expand/shorten/professional/translate in the post composer, the chat box (including fix-my-selection), profile fields, product descriptions, Q&A answers.
- **Understanding:** catch-me-up digests, chat summaries, post translation, voice-note transcripts, “show me what matters” briefings.
- **Hiring intelligence:** applicant ranking with reasons, job ↔ worker matchmaking, cover notes, interview prep, resume building, verified skill quizzes.
- **Commerce intelligence:** the shopping concierge (“a gift under \$30 for a contractor”), grounded customer-service drafts, checklist generation from a group's own conversation.
- **Actions with consent:** draft an invoice, create an event, schedule a post — proposed as a card, executed only on your confirm, via the same routes you'd use by hand.
- **Safety by construction:** brand-safe voice, graceful no-key degradation, moderation heuristics + an admin AI scanner — and 1:1 DMs are never scanned.

Design law: comets orbit only while the AI truly works — thinking → streaming → one final lap → gone. The animation is a status light, not a show.

Profile — everything yours

One calm hub for identity and operations: the wallet card up top, then grouped rows — Business, Work & Network, Library, Money, Planning, App. ~35 personal surfaces that used to scatter now live in one place.

What makes it Atwe

- **A real wallet:** balance + ledger, send/request to any @handle, pots with goals, splits, pools, scheduled payments, payment links, gift cards as true store-credit, top-ups and bank cash-outs — engineered with claim-before-charge safety and tested money invariants.
- **The professional you:** skills with endorsements and verified quizzes, experience, education, certifications, recommendations with approval, who-viewed-me with honest reciprocity, a profile-strength meter.
- **The business cockpit:** storefront management, orders to fulfil, coupons, bundles, sponsored campaigns, team seats with granular permissions, analytics — behind the owner dashboard's needs-attention list.
- **Creator money:** subscriptions and tiers, PPV posts, tips, paid newsletters and events, affiliate earnings, loyalty points.
- **Control:** the full iOS-style settings tree — privacy, notification categories with quiet hours, devices & sessions, 2FA, app lock with per-section locks, data export, hibernate/delete.

Profile hub — wallet card up top · grouped worlds of yours

The platform beneath

The invisible half that makes the visible half trustworthy — identity, safety, realtime, operations.

🛡️ Trust & safety

Full reporting taxonomy → admin queue with bulk actions · appeals with due process · suspend/ban with instant session revoke · AI content scanning (never 1:1 DMs) · blocks enforced both directions everywhere · honest not-E2EE privacy explainer · GDPR/CCPA request paper trail.

🔒 Security

Revocable per-device sessions · TOTP 2FA with recovery codes · QR device-link login · login alerts with geo · app & section passcodes · rate limits and wallet velocity caps · fraud wallet-freeze · OAuth (Google/Apple).

⚡ Realtime

One SSE stream per device carrying messages, typing, presence, reads, reactions, calls, wallet and order events · multi-device sync · authoritative presence snapshots on reconnect · web push with quiet hours.

🖨️ Operations (admin console)

Staff RBAC with scoped permissions · revenue & custodial-float reconciliation · growth (DAU/WAU/MAU) and traffic analytics · feed-signal measurement with live-tunable ranking weights · feature flags / kill switches · background-job health · append-only audit log · platform activity firehose · logged, time-boxed “view as user” support impersonation · disputes, refunds, cards program, username inventory.

Why this page is in a product book: every marketplace that wins does so on operations. Atwe's back office is already the size of a small bank's — built before scale, so scale doesn't break it.

04

Built Today

The complete inventory of what already ships — the coverage proof. 24 categories, 230+ member-facing features, every one live in the product at print time.

The state of the product

Before the inventory, the audited headline: Atwe was measured feature-by-feature against the combined checklist of twelve platforms — X, LinkedIn, WhatsApp, Telegram, Shopify, TikTok, eBay, Discord, Slack, Teams, Google Business Profile, and a cross-platform AI benchmark. This is where it stands.

218

shipping today

188 complete + 30 shipped-differently (often better — e.g. balance-funded escrow vs. card-only)

82

partial

the finishing list — most are small "last-10%" items

107

missing

the deliberate roadmap of Part 5 — none block launch

Coverage against each reference platform

VS.	COVERAGE	READING
Google Business Profile	71%	Local business presence essentially matched — plus commerce GBP doesn't have.
WhatsApp (+ Business)	69%	Messaging at near-parity; ahead on scheduled sends, threads-per-person, in-chat commerce.
Telegram	59%	Core + business tools matched; bots/mini-apps deliberately deferred.
TikTok & Shop	56%	Shoppable content + live shopping present; entertainment-video tooling intentionally thin.
X	55%	The feed skeleton fully present; creator-payout economics deferred.
LinkedIn (all tiers)	52%	Profiles/jobs/hiring strong; recruiter-enterprise and CRM tiers are Part 5 whitespace.
Slack · Teams · Discord	35–44%	Business messaging present; deep workplace-suite features deliberately out of scope.
Shopify	30%	The storefront core exists; the full commerce-OS long tail is the biggest Part 5 category.
AI benchmark	22%	The lowest number and the biggest prize — see Part 5.4 and Part 6.

How to read Part 4: each table row is one live feature with what it does. World tags mark where it lives. Together these pages are the answer to “what does Atwe actually have?” — every single thing.

Platform · Accounts & Identity

FEATURE	WHAT IT DOES — LIVE TODAY
Personal & business accounts	Chosen at signup; a business IS an account — the employer & seller surface, no separate pages.
@username handles	Unique handles for people and businesses — ahead of WhatsApp's 2026 rollout.
Verified badge	Neutral silver seal (never blue), scaled to the name it sits next to, everywhere a name appears.
Business verification	Request → admin review → verified-business badge (green-tick equivalent).
Affiliation badges	X-style org logo after the check: business affiliates a member, or custom upload with admin approval.
Premium handle marketplace	Reserved names sellable for a price; atomic wallet-funded claim; admin inventory of millions.
Rich profiles	Banner, avatar, headline, bio, location, website, join date, categories/industries.
X-style profile page	Posts · Replies · About · Business · Media · Likes tabs; pinned post; lazy panes for memory.
Business profile extras	Hours with live Open/Closed, categories, storefront, reviews, Q&A, booking, one configurable CTA pill.
Default avatars	Single flat tone (no rainbow palettes); businesses render app-shaped, people circular.
Open-to-Work ring	Blue avatar ring with visibility control (everyone / recruiters-only / off).
Profile QR code	Personal QR deep-link + in-app scanner to open a scanned profile.
Deep-link peek	A shared profile link is viewable signed-out (X-style), then gated — SEO-friendly front door.
Rich link previews	OG cards for profiles/groups/circles when shared into WhatsApp, iMessage, X, Slack.

Home · Feed & Posts

FEATURE	WHAT IT DOES — LIVE TODAY
For You feed	Engagement + recency ranked with per-viewer personalization, exploration slots, topic diversity.
Following feed	Pure chronological timeline.
Infinite scroll	Endless feed with seen-suppression (no recycling within 3h), end-cap, DOM-bounded for iOS stability.
Post composer	Text, up to 4 photos (mosaic grid), GIFs, polls, alt text, location; floating sheet design.
Threads	2–25 chained segments posted as a connected sequence.

[Home](#) · Feed & Posts (continued)

FEATURE	WHAT IT DOES — LIVE TODAY
Quote posts & reposts	With attribution line; reposts resurface in followers' feeds.
Post editing	1-hour window, "Edited" label; 10-second undo toast after posting.
Reply controls	Everyone / following / mentioned / verified — enforced server-side, shown on the card.
Polls	Multi-option poll cards in posts (and in chats).
Bookmarks & folders	Private saves (Collections tab) organized into folders, with a mover and manager.
Scheduled posts & drafts	Server-saved drafts; schedule to a future time with a pending manager.
Entity linking	@mentions (with autocomplete), #hashtags (indexed + followable), \$cashtags — everywhere.
Cashtag pages	Live price, canvas chart (1D–ALL), inline price cards on posts — optional market data, degrades cleanly.
Hashtag pages & trending	Tag pages with follow toggle; trending widget.
Image viewer	Full-screen with engagement bar, forward/share/download menu.
Post views & analytics	Deduped view counts; per-post author analytics (impressions, engagements, 14-day trend).
Translate post	Inline translation into the reader's language, with show-original.
Image alt text + AI	Accessibility alt text, hand-written or AI-generated from the photo.
Tag people & co-authors	Up to 20 tags + 5 collaborators, validated and notified.
Product tags on content	Up to 5 of your products on any post / reel / story → quick-buy sheet → escrow checkout.
Pin post to profile	One pinned post with label, de-duped from the timeline.
"Not interested"	Per-post negative signal that hides and down-ranks the author for you.
Postshot	Renders any post to a clean shareable PNG (canvas, no dependency) with forward/share/download.
Lists	Curated member lists with their own timelines.
Reels / shorts	Short photo/video feed posts in an immersive vertical viewer with engagement rail.
Feed comments & votes	Immersive-feed comments sheet, like/dislike voting, saves, author follow from the rail.

Home · Feed & Posts (continued)

FEATURE	WHAT IT DOES — LIVE TODAY
Discover shorts	Out-of-network short content surfaced on Explore.

Home · Stories & Highlights

FEATURE	WHAT IT DOES — LIVE TODAY
24h stories	Photo, video (own audio), or text-on-gradient; follower audience; auto-expiry + sweep.
Close Friends	Private story audience with its own manager.
Story replies & reactions	Quick-react emojis + reply bar → lands as a DM card with story snapshot.
Seen-by list	Author-only viewer list per story.
Highlights	Permanent profile collections that snapshot stories past their 24h expiry.
Story tray	Unseen-first gradient rings on the Feeds surface.

Beam · Messaging — core

FEATURE	WHAT IT DOES — LIVE TODAY
1:1 DMs	Text, photos (multi-image carousels), video, files, voice notes, GIFs, stickers.
Multiple threads per person	Email-style extra conversations with per-thread pin/mute/archive/draft/unread.
Groups	Member management, multi-admin roles, invites via rotating links, kick/promote, join approval.
Channels	Broadcast (admin-post-only) groups with follower model.
Communities	Umbrella of sub-groups + auto announcement channel, join/discover.
Broadcast lists	Send once → delivers as individual 1:1 DMs (≤256 recipients).
Message yourself	Self-chat notebook, WhatsApp-style.
Read receipts & ticks	Sent/delivered/read with a reciprocal privacy toggle.
Typing & presence	Live indicators; presence visibility everyone/connections/nobody with WhatsApp-style reciprocity.
Unread management	Per-thread badges, mark read/unread, unread-only filter, "new messages" divider.

Beam · Messaging — core (continued)

FEATURE	WHAT IT DOES — LIVE TODAY
Chat list power UI	Apple-style swipe actions (delete/leave, read/unread), long-press menus, pinned rows, drafts label.

Beam · Messaging — power features

FEATURE	WHAT IT DOES — LIVE TODAY
Reactions, edit, delete	Emoji reactions; edit; delete for me / for everyone — full parity in groups.
Replies & forwarding	Inline reply with quoted context; forward with attribution.
Pin & star messages	Pinned banner per chat; starred aggregate view across DMs + groups.
Disappearing messages	Off / 24h / 7d / 90d per conversation, DM + group.
View-once media	Single-open photo/video; bytes never ship in the thread payload.
Locked chats	Passcode-hidden threads (bcrypt), revealed per session.
Scheduled messages	Queue a DM/group message for later; server flusher delivers; manager UI. Ahead of most rivals.
Voice notes + AI transcripts	Auto transcript captions on both sides, cached server-side; tap-to-expand.
Message search	Content search across all your DMs + groups, plus in-chat search with match stepping.
Chat labels / folders	Color labels with filter bar and per-chat assignment.
Chat wallpapers	Per-conversation background presets.
Quick replies	Saved /shortcut responses (WhatsApp-Business-style).
Greeting & away auto-messages	Business auto-replies with cooldowns; away honors business hours ("outside hours" mode).
Chat export	Range-picked .txt transcript; blocked for locked or no-export chats.
Per-chat privacy	No-export/no-save flag per conversation.
Live location	Stream position to a DM for 15m/1h/8h; live-updating card; stop anytime.
Static location, contacts, events, polls	Rich meta-cards in chat, all server-built.
In-chat commerce cards	Product, order, invoice, quote, offer, money, split, pool, gift, digital-delivery cards — tappable actions.

Beam · Messaging — power features (continued)

FEATURE	WHAT IT DOES — LIVE TODAY
Cart-recovery nudge	One polite auto-Beam with 1-tap checkout for abandoned carts; capped, mutable, opt-out.
Group Cloud	Shared drive per group: folders, files, notes, sheets, checklists (assignable + AI), forms, schedules/rota, rosters, expense logs; CSV export.
Stickers & GIFs	Custom sticker packs (transparent PNG pipeline) + Tenor/Giphy search.
@mentions in groups	Member pings with notifications.

Beam · Calls & Live

FEATURE	WHAT IT DOES — LIVE TODAY
1:1 voice & video	WebRTC with TURN relay, non-trickle ICE (iOS-proof), call-log cards in the thread.
Group calls	Mesh video/voice up to 8.
Call links	Shareable join-by-link ad-hoc rooms (WhatsApp-style), revocable.
Silence unknown callers	Unknown 1:1 calls don't ring; still logged as "Silenced" — never lost.
Screen share	getDisplayMedia sharing in calls.
Go Live	One-to-many video broadcast with viewer roster.
Spaces (audio rooms)	Stage + raise-hand + promote/demote, X-Spaces-style.
Live shopping	Pin one of your products to a live stream; viewers get a buy card.
Recents	Call log with direction, duration, missed-in-red, silenced label.

Home · Network & Social Graph

FEATURE	WHAT IT DOES — LIVE TODAY
Follows	Follow graph feeding Following + stories.
Connections	Request → accept mutual graph with suggestions ("people you may know", friends-of-follows).
Skills & endorsements	Skill list, peer endorsements, AI-quiz skill assessments with ✓ badge.
Experience & education	Work history (linkable to business accounts), education, licenses & certifications.

Home · Network & Social Graph (continued)

FEATURE	WHAT IT DOES — LIVE TODAY
Recommendations	Written recs with subject approval flow.
Who viewed my profile	90-day viewer list, 7-day teaser, private-browsing reciprocity; Pro-gate ready.
Featured & Showcase	Pinned highlight row + a portfolio surface (projects/products) with likes and comments.
Profile strength meter	9-item completeness checklist with nudges.
Blocks & mutes	Blocks enforced both directions everywhere; muted accounts + muted words (feed-silent).
Contact book	Saved contacts with detail cards, editable fields, reverse "who saved me" list.

Platform · Notifications & Realtime

FEATURE	WHAT IT DOES — LIVE TODAY
Notification center	X-style rows, unread dots, deep links to the exact surface, security-alert detail page.
Per-category preferences	Toggle every muteable category; money/messages never muted.
Quality filters	X-style: mute strangers, new accounts, no-avatar, unconfirmed-email actors — never people you follow.
Quiet hours / DND	Local-time window that suppresses push (rows still land in-app).
Web push	VAPID push with per-device subscriptions, dead-endpoint pruning, deep-link clicks.
SSE realtime	One stream per device: messages, typing, presence, reads, reactions, edits, calls, wallet, orders, notifs.
Multi-device	Presence across devices; read-sync clears badges everywhere; authoritative presence snapshots on reconnect.
Re-engagement push	"What you missed" nudge after 3+ days away, rate-limited.

Engine · Search, Discovery & Personalization

FEATURE	WHAT IT DOES — LIVE TODAY
Universal search	All · People · Services · Shop · Jobs · Businesses · Industries · Posts · Feeds · Chats · Groups scopes.
Advanced post operators	from: · #tag · since:/until: · has:image video · min_likes: · sort: — injection-safe.
Explore page	Ask-AI hero, DISCOVER tiles, Trending, Who-to-follow, Discover shorts, circle search.

Engine · Search, Discovery & Personalization (continued)

FEATURE	WHAT IT DOES — LIVE TODAY
Industry circles	Company-defined official industry feeds; joinable; no user creation — the differentiator.
Business directory	Verified-first browse with industry filter and follower/job counts.
Near-me discovery	Haversine distance sort with "Near me" toggle and distance chips (no external maps).
Local hub	One search across services, businesses, listings, jobs, events.
Recent searches	Logged, manageable, and used as a soft ranking signal.
Personalized ranking	Interests, followed tags, engaged authors (recency-decayed), dwell time, searches; "not interested" downranks.
Ranking observability	Per-signal impressions/engagement analytics + live-tunable weights from the admin (no deploy).
Who to follow	Friends-of-follows suggestions with "Followed by X and Y" social proof.
New-member onboarding	Goal → topics → people cold-start flow that seeds the algorithm on day one.
Feature intro sheets	Once-per-account welcome cards per world (Beam, Circles, AI, Wallet).

Engine · Jobs & Hiring

FEATURE	WHAT IT DOES — LIVE TODAY
Job posts	Industry, location, remote, salary range, hours; free-business cap with Pro lift.
Job search & filters	Featured-first lists, saved jobs, applied tracker with live status tags.
Easy Apply	Resume snapshot + cover note attach; AI cover-note writer.
Screening questions	Up to 5 with knockout logic and auto Meets/Missing flags.
Applicant pipeline	Applied → reviewed → shortlisted → rejected → hired; candidate notifications; bulk status moves.
AI applicant ranking	Score every applicant with reasons; % fit chips (read-only, never auto-rejects).
"How you match"	0–100 score + skills to highlight, per seeker per job; heuristic fallback.
AI interview prep	Likely questions + tailored tips + questions to ask.
Salary insight	Peer-median band with Above/Competitive/Below badge.

Engine · Jobs & Hiring (continued)

FEATURE	WHAT IT DOES — LIVE TODAY
Job analytics	Views, uniques, apply rate, 14-day trend, pipeline breakdown for the poster.
Open to work listings	Worker board with rate/schedule/remote filters and budget sort.
Saved candidates & alerts	Employer candidate saves; seeker job alerts on saved searches.
Referral asks	Find connections who work at the employer; request a referral in-app.
AI matchmaker	Retrieval + AI-ranked job ↔ worker matching with explanations.
AI resumes	Guided builder → structured CV; save, print, edit; enriched from your real profile.

Engine · Marketplace & Commerce

FEATURE	WHAT IT DOES — LIVE TODAY
Listings	Anyone with a handle sells: physical, digital, service, rental; galleries, variants (size/color) with per-variant stock/price.
Structured details	Amenities + spec tables on products and services (real-estate/vehicle/equipment-grade).
Marketplace browse	Kind tabs, filters (price/rating/stock), sorts, Best Match ranking (relevance+quality+velocity+recency+trust).
Sponsored listings	Real CPC second-price auction with budgets, pacing, suggested bids, analytics, admin oversight.
Cart & checkout	Per-seller carts, address book, shipping options, coupons, gift-card split-tender, wallet or Stripe.
Buy now & offers	Instant buy; make-offer negotiation with counter flow → pays into a normal order.
Escrow / buyer protection	Funds held until buyer confirms; auto-release; disputes with admin resolution. The trust layer.
Orders & fulfillment	Status timeline, carrier+tracking links, packing slips, live SSE updates, confirmation emails.
Shipping labels	Real multi-carrier labels (Shippo) charged from the seller wallet; idempotent; auto-delivered webhook.
Returns / RMA	Request → approve/decline → refund + restock; optional prepaid return labels.
Product reviews	Verified-buyer star reviews with photo/video media; seller (business) reviews; buyer ratings — two-way.
Trust score	0–100 marketplace credibility from tenure, completed orders, ratings, verification.
Product Q&A	Amazon-style questions with seller-flagged answers.

Engine · Marketplace & Commerce (continued)

FEATURE	WHAT IT DOES — LIVE TODAY
Coupons	Percent/fixed codes with min-order, caps, expiry, one-per-buyer atomic claims.
Bundles	Multi-product saver packs priced as one, riding the whole order pipeline.
Subscribe & Save	Recurring product delivery with discount, interval control, pause/resume, failure handling.
Wishlist + alerts	Saved products double as price-drop and back-in-stock watchers.
Saved market searches	Query alerts when matching listings appear.
Local pickup	Per-listing pickup option that skips shipping.
Digital delivery	Instant license/download delivery on payment via DM card + order detail.
Rentals	Night/day/week/month price units, date-range booking, host confirm, wallet pay.
Sales tax & carrier rates	Optional tax + live-rate modules with quote preview; degrade to flat/zero.
Storefronts	Business shop tab + full store page with menu-section grouping; Manage-store hub.
Seller analytics	Revenue, units, to-ship, top products, 14-day trends; business analytics with reach + tag taps.
Demo mode	~100 tagged demo accounts to preview a busy platform; one-click teardown; buying blocked.

Engine · Services, Events, Courses & Programs

FEATURE	WHAT IT DOES — LIVE TODAY
Services directory	First-class service profiles (category, area, rate) with contact-by-chat.
Appointments & booking	Bookable services, Calendly-style open slots from business hours, deposits held in escrow, confirm/decline lifecycle.
Events	Host/RSVP with capacity caps, paid tickets, attendee lists, ICS export, host/attendee notifications.
Courses / LMS	Modules → lessons (video+notes), enrollment (free or wallet-paid), progress tracking, profile teaching tab.
Newsletters	Creator newsletters with paid tiers, issues that notify subscribers, reader.
Unified agenda	One time-sorted view of appointments + events.
Business Q&A	Public questions on business profiles with owner-first answers.

Engine · Services, Events, Courses & Programs (continued)

FEATURE	WHAT IT DOES — LIVE TODAY
Business hours	7-day schedule with live open/closed badge.
Team / multi-seat	Business staff with granular permissions (jobs/QA/orders/reviews) acting as the business.
Owner dashboard	One needs-attention hub: orders to fulfil, requests, applicants, reviews to answer.

Profile · Wallet & Money

FEATURE	WHAT IT DOES — LIVE TODAY
Wallet balance	Per-account balance with append-only zero-sum ledger.
Send money	To any @username; instant internal transfer; velocity caps; idempotent double-tap safety.
Money requests	Ask → payer pays from balance; claim-first race safety; DM pay cards.
Top-up & cash-out	Stripe top-up; Connect payouts to bank with onboarding + live status.
Savings pots	Sub-balances with goals and progress bars.
Split bills	Equal or custom shares across ≤20 people; pay-from-balance; progress tracking.
Money pools	Group fundraising toward a goal with contributor lists and shareable cards.
Scheduled payments	One-time future or recurring standing orders with pause/retry/failure handling.
Payment links	Shareable pay-me links, fixed or open amount, with counters.
Gift cards	A separate spendable balance: buy/send/claim/move-to-wallet/split-tender at checkout; admin freeze + company-issued comps.
Invoices	Itemized bills with DM pay cards, due dates, Stripe or demo pay.
Quotes / estimates	Priced proposals → accept converts to an invoice automatically.
Tips	One-off support with presets, Stripe or demo.
Loyalty points	~1% back on purchases, tiers, redeem to wallet credit.
Referral program	Shareable codes; both sides earn wallet credit on qualified signup.
Atwe Card (waitlist)	Debit-card program surface with flip-card UI and waiting-list capture.

Profile · Wallet & Money (continued)

FEATURE	WHAT IT DOES — LIVE TODAY
Money-grade safety	Webhook idempotency, claim-before-charge everywhere, velocity caps, wallet freeze, non-negative DB constraint — all covered by an automated money test suite.

Profile · Creator Monetization

FEATURE	WHAT IT DOES — LIVE TODAY
Creator subscriptions	Recurring monthly subs with real Stripe billing + cancel-at-period-end.
Multi-tier subs	Up to 5 priced tiers; higher unlocks more; tier-gated posts.
Subscriber-only posts	Locked teasers on profile, hidden from public feeds.
Pay-per-view posts	Unlock a single post for a price; race-safe double-tap protection.
Promoted posts	Self-serve "Ad"-labeled boosts hoisted in For You.
Job boosts	Featured placement for job posts.
Atwe Ads	First-class sponsored creatives: request → admin review → pay → feed serving with impression/click tracking.
Ads Manager	One dashboard across promoted posts, boosted jobs, sponsored campaigns.
Affiliate program	Per-product referral links with commission on attributed sales, click tracking, earnings dashboard.
Company revenue ledger	Every platform payment recorded; admin revenue dashboard with trends and payment feed.

Platform · Atwe AI

FEATURE	WHAT IT DOES — LIVE TODAY
Assistant chat	The AI world: business-focused chat with history, projects, image input, voice dictation.
Writing copilot	Improve/expand/shorten/professional/funny/translate across post composer, chat, profile fields.
Selection editor	Select text in the chat box → "Fix with Atwe AI" floating toolbar.
Catch me up	Digest of your network's recent posts.
Show me what matters	AI briefing over relevant posts, people, and open roles.
Agentic actions	Draft invoice / create event / schedule post / draft reply — always behind a confirm card, reusing your real authenticated routes.

Platform · Atwe AI (continued)

FEATURE	WHAT IT DOES — LIVE TODAY
AI shopping concierge	Natural-language product search with reasons; heuristic fallback.
AI business assistant	Product-description writer; grounded customer-service answer drafts for Q&A.
AI for hiring	Applicant ranking, job ↔ worker matchmaker, cover notes, interview prep, resume builder, skill quizzes.
AI summaries	Chat summaries, group checklist generation from conversation, voice-note transcription.
AI moderation	Heuristic + model classification on posts; full admin AI content scanner across public surfaces (never 1:1 DMs).
Brand-safe everywhere	Every surface speaks as "Atwe AI"; degrades gracefully with no key (503/heuristics).

Platform · Privacy, Safety & Moderation

FEATURE	WHAT IT DOES — LIVE TODAY
Granular account privacy	Presence visibility, connections-list hiding, who-can-request, who-can-add-to-groups, personalization opt-out.
Private browsing	Anonymous profile viewing with honest reciprocity trade-off.
Reporting	Full X-style reason taxonomy on jobs, listings, users, posts, videos; one open report per target.
Admin moderation queue	Resolve/dismiss/remove + bulk actions; auto-flagged items sorted first.
Appeals	Suspended/banned users appeal from the login screen with password re-proof; staff grant/deny.
Account enforcement	Suspend (timed, auto-lift) / ban / reinstate with instant session revoke.
Hibernate & delete	Reversible deactivation (hidden everywhere); GDPR/CCPA data-request paper trail with deadlines.
Data export	Owner-scoped JSON bundle of your data.
Honest encryption notice	In-chat privacy explainer that never claims E2EE — transit encryption + private storage, stated plainly.

Platform · Security & Sessions

FEATURE	WHAT IT DOES — LIVE TODAY
Real session store	Revocable per-device sessions with UA/IP/location, last-seen; password reset revokes all.
Two-factor (TOTP)	Authenticator 2FA with challenge-gated login + 10 single-use recovery codes.

Platform · Security & Sessions (continued)

FEATURE	WHAT IT DOES — LIVE TODAY
QR device-link login	WhatsApp-style "link a device" with hashed single-use codes, confirm sheet, sign-in alerts.
App lock	Device passcode gate (native-style pad) + per-section locks for Wallet/Storefront.
Login alerts	New sign-in emails with device + approximate location.
Change email / password flows	Password-gated email change with re-verification; single-use hashed reset tokens.
Rate limiting & velocity caps	Per-route limits; \$ daily/weekly outflow ceilings; wallet freeze for fraud holds.
OAuth sign-in	Google + Apple web sign-in with account completion step.

Platform · App, Design & Platform

FEATURE	WHAT IT DOES — LIVE TODAY
Installable PWA	Network-first service worker, offline shell, versioned caches, home-screen install.
Black + Light themes	System-aware; full token system; custom accent color picker (12 presets + custom).
iOS-grade polish	Safe areas, status scrim, finger-tracked bar hide, axis-locked scrolling, 60fps lists, reduced-motion.
Accessibility	Focus rings, ARIA dialogs, live announcer, alt text, Dynamic-Type-style larger text, WCAG-checked palette.
14-language i18n + RTL	Framework + curated strings; Arabic/Hebrew mirroring.
Offline handling	Online/offline banners, queued sends with client-id idempotency, resync on resume.
Settings hub	iOS-Settings-style hub → sub-pages with search, covering every account/privacy/security surface.
Admin console	Separate-origin dashboard: users, staff RBAC, revenue, finance reconciliation, growth/traffic analytics, feeds tuning, feature flags, background-job health, audit log, activity firehose, impersonation ("view as user"), investigations, disputes, refunds, cards program, AI scan.
Native iOS app (in build)	Expo SDK 54 foundation live on-device: five-world tabs, tokens, secure auth, real login, native Home feed — Phase 1 underway.

05

The Road Ahead

Every feature planned or wanted for the next one to two years — drawn from the audit's gap list, the competitor playbook, the design blueprint's NEXT items, and advisor judgment. Prioritized, sized, and honest.

How to read the roadmap

Direction, not promises. Each item carries a horizon and an effort size so the year can be planned like an adult: pick from NOW until it's done, pull from NEXT when capacity opens, revisit LATER each quarter.

NOW · launch window

The next ~3 months: public opening, the iOS phases, and the small high-leverage items that multiply everything else.

NEXT · 6–12 months

The competitive climbs: AI depth, CRM whitespace, commerce storefront power, professional-graph upgrades.

LATER · 12–24 months

The platform plays: APIs, fintech, enterprise, media infrastructure at full scale.

Effort sizes

S days · **M** 1–3 weeks · **L** a month or more / needs infrastructure.

The five bets the roadmap makes

- **1 · The native apps carry distribution.** Phones are where business owners live; the App Store is the next growth channel.
- **2 · Media infrastructure unlocks everything.** Object storage + CDN is one project that upgrades photos, video, files, stories and reels at once.
- **3 · Atwe AI becomes the operator.** Memory, briefings, receptionist, analyst — the 22% audit score is the biggest single opportunity on this list.
- **4 · CRM is the empty throne.** No rival owns “sales pipeline inside the network” for small business. Atwe already has the contacts, chats and money rails.
- **5 · Trust compounds.** ID verification, verified jobs, transparency panels — every trust feature raises conversion everywhere else.

The iOS & Android apps

The single biggest strategic build of the coming year — the five-world native app, phase by phase (foundation + native Home feed already running on device).

FEATURE	WHAT IT IS	HORIZON	SIZE
Phase 1 — Core shell & account	Onboarding, signup, settings, deep links, offline, push registration.	NOW	M
Phase 2 — Home	Full feed parity: stories, composer, post detail, circles, collections.	NOW	L
Phase 3 — Beam	Chats, groups, media, reactions, presence — then calls.	NOW	L
Phase 4 — Engine	Search, marketplace + checkout, jobs, services, businesses.	NEXT	L
Phase 5 — Atwe AI	Assistant chat + confirm-card actions, native.	NEXT	M
Phase 6 — Profile & money	Me hub, wallet, storefront management, analytics.	NEXT	L
Phase 7 — App Store	HIG/VoiceOver audit, Apple Pay, TestFlight beta → public listing.	NEXT	M
Android release	Same codebase → Google Play (Expo builds both).	NEXT	M
Native push (APNs/FCM)	Device push wired to the existing notification engine.	NOW	S
Home-screen widgets	iOS widgets: wallet balance, orders, unread, AI shortcut.	LATER	M

Messaging & Beam

FEATURE	WHAT IT IS	HORIZON	SIZE
Encryption posture v2	Publish a security whitepaper; evaluate E2EE for 1:1 ("secret chats") — a real differentiator decision.	LATER	L
Custom & animated reactions	Any-emoji reactions beyond the core set.	NEXT	S
Group topic threads	Threaded replies / topics inside big groups (Slack/Telegram-style).	NEXT	M
HD media & large files	Raise media ceilings via object storage + CDN (see Platform).	NOW	M
Team inbox & assignment	Route business DMs to staff members; shared inbox with ownership.	NEXT	M
Message templates	Reusable structured outbound templates for businesses.	NEXT	S

Messaging & Beam (continued)

FEATURE	WHAT IT IS	HORIZON	SIZE
Interactive business buttons	Business-defined reply buttons / list pickers inside chats.	NEXT	M
In-chat forms (Flows)	Structured mini-forms customers fill without leaving chat (booking, intake).	LATER	M
Silent send & per-chat sounds	Send without notifying; custom notification sounds.	LATER	S
Conversation analytics	Business messaging metrics: response time, resolution, volumes.	NEXT	M
Chat folders v2	Custom folder tabs across the chat list (beyond labels).	LATER	S

Content & Home

FEATURE	WHAT IT IS	HORIZON	SIZE
Articles (long-form)	Formatted long-form publishing beyond newsletters — business thought leadership.	NEXT	M
Rich text in posts	Bold/italic formatting in the composer.	NEXT	S
Document posts	PDF/deck carousels on posts (LinkedIn-style) — very business-native.	NEXT	M
Video posts everywhere	First-class video on main posts (today video lives in reels/stories).	NOW	M
Longer & landscape video	Multi-minute uploads once media storage lands.	NEXT	M
History tab	"Posts you viewed" for easy re-finding.	LATER	S
Playlists / series	Organize video content into ordered sets.	LATER	M
Celebration posts	Structured milestone posts (opened a store, work anniversary, hire).	NEXT	S
Quote-from-bookmarks	Quick-quote a saved/liked post into the composer.	LATER	S
Live studio	A proper broadcast console for Go Live (scenes, pinned comments, invites).	LATER	L
Video editor & effects	In-app trim, captions, green-screen for reels.	LATER	L
Audio library	Licensed sounds for reels — licensing decision first.	LATER	L
Topic snooze	Temporarily mute a topic/format in For You (30 days), not just forever-mute.	LATER	S

Creator economy

FEATURE	WHAT IT IS	HORIZON	SIZE
Creator revenue share	Engagement-based payouts from ad revenue — the loyalty flywheel.	LATER	L
Series / paid content packs	Sell bundles of premium video (courses already cover much of this).	LATER	M
Live gifts	Virtual gifting during live streams (tips exist; make them live-native).	LATER	M
Media studio	Creator content-management + monetization dashboard in one.	LATER	M
Brand-deal marketplace	Match businesses with creators for sponsored content (Find Creators).	LATER	L
Sample management	Sellers send products to creators for promotion.	LATER	M

Commerce & Storefront

FEATURE	WHAT IT IS	HORIZON	SIZE
Media on object storage + CDN	Move base64 media to S3/R2 + CDN — unlocks HD everything; the #1 platform investment.	NOW	L
Storefront themes	Seller-customizable store layouts, banners, featured collections.	NEXT	M
Typo-tolerant product search	Fuzzy full-text search within stores and marketplace.	NEXT	M
Auctions	Timed listings with bidding (offers already exist).	LATER	M
B2B & wholesale	Volume pricing, net terms, business catalogs — a natural Atwe strength.	LATER	L
Delivery-promise dates	Estimated arrival at checkout from carrier data.	LATER	M
Offers to watchers	Sellers send targeted discounts to wishlisters.	NEXT	S
AI product photography	Background removal / enhancement on listing photos.	NEXT	M
Photo-to-listing	Snap a photo → AI drafts title, description, category, price.	NEXT	M
Marketing automation	Campaign builder over email/push/Beam with segments and attribution.	LATER	L
Custom reports	Seller-defined analytics exports.	LATER	M
Capital / lending	Merchant advances against sales history — far-future fintech.	LATER	L

Commerce & Storefront (continued)

FEATURE	WHAT IT IS	HORIZON	SIZE
POS / in-person	Tap-to-pay in-person selling tied to the same inventory.	LATER	L
Multi-currency & tax v2	Currency display + broader tax automation for international sellers.	LATER	L

Jobs & professional

FEATURE	WHAT IT IS	HORIZON	SIZE
Connection degrees	1st/2nd/3rd labels + mutual paths ("via Sarah") on profiles and search.	NEXT	M
Verified job postings	Trust mark on jobs from verified businesses.	NOW	S
Recruiter projects	Shared candidate pipelines with notes for hiring teams.	LATER	M
Advanced people search	Stacked professional filters (title, industry, years, education).	NEXT	M
Company insights	Headcount trends, hiring velocity on business profiles.	LATER	M
Career pages	A business's jobs, culture posts, and team in one tab.	NEXT	S
ATS integrations	Export/synchronize applicants with external tracking systems.	LATER	L
Skills graph v2	Standardized skill taxonomy powering matching and search.	LATER	M

Sales, CRM & B2B

The biggest whitespace in the audit — no rival owns "CRM inside the network" for small business.

FEATURE	WHAT IT IS	HORIZON	SIZE
Lightweight CRM	Deals/leads/customers on top of existing contacts + labels; pipeline views.	NEXT	L
Lead lists & alerts	Save prospects; get alerts on their activity (posting, hiring, launching).	NEXT	M
Smart links	Trackable content links showing who viewed what — sales gold.	NEXT	S
Buyer-intent signals	Surface accounts showing interest (profile views, listing views, searches).	LATER	M

Sales, CRM & B2B
(continued)

FEATURE	WHAT IT IS	HORIZON	SIZE
AI prospecting	Personalized outreach drafts grounded in the lead's profile + activity.	NEXT	M
CRM sync	Two-way Salesforce/HubSpot connectors — enterprise later.	LATER	L

Atwe AI — the assistant that runs your business

The audit's lowest coverage area (22%) and the biggest opportunity: every rival ships an assistant; none ships one that runs a small business end-to-end.

FEATURE	WHAT IT IS	HORIZON	SIZE
AI memory	Persistent context: your people, projects, preferences, tone.	NEXT	L
Proactive daily briefing	Morning digest: missed messages, orders, applicants, money — before you ask.	NEXT	M
Search across your data	Answer from your own posts, chats, orders, files ("what did Sarah quote me?").	NEXT	L
AI receptionist	Auto-answer inbound business DMs 24/7 from your catalog/hours/FAQ, human-handoff on demand.	NEXT	L
More agent tools	Create listings, storefront setup, price changes, booking management — all confirm-gated.	NOW	M
Agent workflows	Chain multi-step automations ("every Friday, invoice unpaid orders and post a recap").	LATER	L
Recurring AI tasks	Schedule the assistant to run tasks on a cadence.	LATER	M
AI analytics analyst	"Why are sales down this week?" — narrative answers over your dashboards.	NEXT	M
Image generation	Product/post visuals from a prompt; profile-photo enhancement.	LATER	M
Voice mode	Talk to Atwe AI hands-free.	LATER	M
Inline AI charts	Turn numbers in a chat/answer into a visual chart.	LATER	S
AI-content labeling	Disclose/auto-detect AI-generated content — a trust feature.	LATER	M
AI action audit log	Every AI action reviewable by the account owner/admin.	NOW	S
Purchase-order & restock drafts	Generate POs from stock levels.	LATER	M

Calls & meetings

FEATURE	WHAT IT IS	HORIZON	SIZE
Larger group calls	Beyond 8 → 32 via an SFU media server; the mesh has natural limits.	NEXT	L
Call recording & transcripts	Record + AI meeting notes/action items — huge for business.	NEXT	L
Live captions	Real-time captions (+ translation later) in calls.	LATER	M
Scheduled meetings	Calendar-native scheduling with lobby and reminders (agenda exists).	NEXT	M
Webinars / town halls	Structured large-audience events on top of Go Live.	LATER	L
Breakout rooms	Split a group call into smaller rooms.	LATER	M

Groups & communities power

FEATURE	WHAT IT IS	HORIZON	SIZE
Roles & permissions v2	Granular per-channel permissions, custom roles (Discord-grade).	LATER	M
Rules gate & onboarding	Agree-to-rules before posting; guided member onboarding.	NEXT	S
Community insights	Member activity/retention analytics for owners.	LATER	M
Community monetization	Paid membership tiers for communities/groups.	LATER	M
AutoMod for owners	Keyword/spam auto-moderation rules per group (platform AI-mod exists).	NEXT	M
Collaborative docs v2	Real-time co-editing in Group Cloud notes/sheets.	LATER	L

Platform & apps

FEATURE	WHAT IT IS	HORIZON	SIZE
Account switching	Multiple accounts without logout — critical for owner + business pairs.	NOW	M
Passkeys	Passwordless sign-in; the modern default.	NEXT	M
Advanced search operators everywhere	Extend post operators to messages and files.	LATER	S
Desktop apps	Mac/Windows wrappers with badges and notifications.	LATER	M

Platform & apps (continued)

FEATURE	WHAT IT IS	HORIZON	SIZE
Public API & webhooks	Let businesses integrate Atwe with their systems; the platform play.	LATER	L
Offline queue v2	Full offline compose-and-sync across surfaces.	LATER	M
Horizontal scale prep	Redis for SSE/presence/rate-limits; server modularization; read replicas.	NEXT	L

Trust & identity

FEATURE	WHAT IT IS	HORIZON	SIZE
ID verification	Government-ID check for an "ID verified" label — fights impersonation, premium candidate.	NEXT	M
Workplace verification	Verify employment via business-domain email.	NEXT	S
Community notes	Crowdsourced context on viral posts — evaluate carefully for a business network.	LATER	L
About-this-account	Transparency panel: join date, region, name changes.	NEXT	S
Verified-org tiers	Structured business verification levels (docs → premium seal).	LATER	M

Growth & monetization

FEATURE	WHAT IT IS	HORIZON	SIZE
Atwe Pro v2	Rebuild Pro around real perks: who-viewed full list, analytics depth, AI limits, badges, boosts.	NOW	M
Starter packs	Curated follow bundles per industry for new members.	NEXT	S
Business referral engine	Reward businesses for bringing their customers/suppliers onto Atwe.	NEXT	M
Targeted ads v2	Audience targeting (industry, geo, interests) on the existing auction rails.	LATER	L
Atwe Card launch	Ship the debit card (issuing partner + KYC) tied to the wallet.	LATER	L
Premium placements	Featured-business slots in directory/local with clear labeling.	NEXT	S

Your ideas

The founder sees what no audit can. Write every idea here the moment it strikes — a feature, a screen, a deal, a category. Numbered so we can discuss them by name (“let’s build #7”).

Deliberately not building — and why

Completeness cuts both ways: the competitor audit lists features Atwe should **not** chase. Naming them here keeps the book airtight — every rival feature is either built (Part 4), planned (Part 5), or a documented decision below. These are choices, not gaps.

WHAT RIVALS SHIP	WHY ATWE SKIPS IT (FOR NOW)
Third-party bot platforms & mini-apps Telegram Bot API, inline bots, embedded mini-apps; Discord Activities	Atwe AI with confirm-gated actions already does the useful jobs bots do, safely and natively. External integration is served later by a public API (Part 5), not a bot marketplace.
In-app crypto Toncoin payments, Telegram Stars	Atwe's wallet is real money with escrow protection. Crypto adds regulatory and UX cost that doesn't fit a business audience that wants dollars in the bank.
Gamer-server community mechanics Discord colored roles, forum/spoiler channels, Soundboard, Server Shop, Nitro, Orbs & Quests	Atwe uses Communities + industry Circles + Channels + Spaces. The Discord server model is built for gaming culture, not a professional network.
Enterprise workplace suite Slack Huddles/Canvas/Workflow Builder/Connect/Loop; Teams PSTN, Whiteboard, Office co-authoring	Atwe serves the small business and its customers, not internal corporate IT. Group Cloud already covers shared files, notes, checklists and rotas — the pieces a small team actually needs.
Vendor-branded AI surfaces Grok, Shopify Sidekick, Microsoft Copilot, Meta Business Agent	Atwe ships its own assistant — Atwe AI — that does the same jobs grounded in the member's real data. We benchmark these rivals (that's the AI section of the audit); we don't embed them.
Retail hardware & external checkout Shopify POS terminals & card readers, Shop Pay, Buy Buttons on other sites	Atwe is a native marketplace with its own wallet and escrow. Physical-retail hardware is a separate business; a light in-person mode is parked in Part 5 (LATER), not the storefront core.
Entertainment-video remix tools TikTok Duet/Stitch, licensed music library, Spark Ads / GMV Max	Reels on Atwe market a business; they don't farm remix virality. A licensed music catalog carries cost and legal weight that a business network doesn't need.
Fulfilled-by-platform warehousing Fulfilled by TikTok, platform-operated storage	Atwe connects sellers to real carriers (live shipping labels via Shippo) rather than operating warehouses — an operations business Atwe deliberately stays out of.
Power-user monitoring dashboards X Radar / X Pro (TweetDeck), full Sales Navigator & Recruiter enterprise tiers	Atwe's analytics and universal search cover the core need. Enterprise sales/recruiting suites exceed the SMB focus — though the useful pieces (advanced people search, CRM-lite, applicant ranking) ARE on the roadmap.
External map tiles & call tracking Google Maps placement, GBP call tracking	Atwe does near-me discovery by real distance without licensing external map tiles or phone-tracking — lighter, private, and enough for local discovery.

The rule behind the list: Atwe adds a feature when it strengthens the one graph, the one wallet, or the one AI — and declines it when it merely imitates a rival's different business. Focus is a feature too.

The verification sweep — final additions

Before this book was declared final, independent AI reviewers ran a ~185-item cross-platform feature checklist against it. The result validated the coverage — **104 items already live, 33 shipped differently, 32 already on this roadmap** — and surfaced the handful below that were genuinely absent from both product and book. They are hereby added to the roadmap, closing the loop.

FEATURE	WHAT IT IS	HORIZON	SIZE
Import & migration tools	“Switch in 60 seconds”: import contacts (CSV/vCard), import a Shopify/CSV product catalog, claim-your-business onboarding. The single highest-leverage addition for the local-business wedge — it deletes switching cost.	NOW	M
Mini public API + Zapier	Pulled forward from LATER: a small read-only API (contacts, orders, messages, listings) + a Zapier connector — unlocks every “does it work with my tools?” conversation.	NOW	M
Help center + tickets	Self-serve help articles + an in-app “Contact support” flow that files a ticket into the admin Support tab (which already exists). support@ becomes a system, not an address.	NOW	M
Wallet statement export	CSV/PDF export of wallet & order transactions — bookkeeping-grade records for businesses.	NOW	S
iOS share extension	Share into Atwe from any app (photo → post/listing/story) — folded into the native-app phases.	NEXT	S
“Why am I seeing this?”	Member-facing per-post explanation — the signal plumbing already exists (it powers the admin feed debugger); this is UI only.	NEXT	S
Recurring posts	Repeat a scheduled post on a cadence (weekly special, monthly reminder) — small-business marketing staple.	NEXT	S
Video captions	Manual + auto captions on video posts/reels (the voice-note transcript pipeline, pointed at video).	NEXT	M
Video notes in chat	Round tap-to-record video bubbles (Telegram-style) alongside voice notes.	LATER	S
Group join questions	Screening questions on join-approval groups (approval flow already exists).	LATER	S
Reminders	Personal reminders on agenda items, posts and chats (“remind me Friday”).	LATER	S
Quote controls	Author toggle for who may quote-post (reply controls already exist).	LATER	S
Notification bundling	Smart digest-grouping of low-priority notifications (“12 likes on your post”).	LATER	S
Local & industry trend rollups	Trending scoped to a city or an industry circle (pairs with the Circle Pulse idea, §6.4).	LATER	M
Handle lifecycle policy	Dormant-handle release rules, username history, and a recovery hold after changes — governance for the handle economy.	LATER	M
Per-business audit trail	An owner-visible log of team-member actions (the platform-side audit log already exists).	LATER	M

Also reviewed and declined: SMS notifications (push covers it at zero cost), remote screen control and approval workflows (enterprise-IT scope — see §5.7), and in-app AI coding (not a business-network job). Decisions, on the record.

06

The Advisor's Brainstorm

Stepping out of the lists: what a product advisor who has read every line of this codebase, every audit row, and every competitor would tell the founder — recommendations, fresh ideas, and honest risks.

The strategic read

Three sentences of truth, then the plan.

1. Atwe's breadth is real and rare — the audits prove a platform, not a feature. 2. Breadth is also the risk: nobody adopts 400 features; they adopt one job done better. 3. So the strategy is sequencing: win one wedge per audience, let the worlds cross-sell themselves, and let the AI become the reason nobody leaves.

The wedge recommendation

Lead with the local business + its customers — the Sarah persona. Why: (a) the audit shows Atwe already matches or beats the incumbents at that job (GBP 71%, WhatsApp Business 69%, plus escrow none of them has); (b) one business pulls dozens of customers into the network with it — built-in distribution; (c) commerce creates revenue and reviews create defensibility from day one.

The order of battle

QUARTER	FOCUS	THE WIN CONDITION
Q3 2026	Public launch + iOS Phases 1–3 + media CDN + account switching + Pro v2 definition	First 100 real businesses with complete profiles and a first sale each
Q4 2026	App Store launch + AI receptionist & briefing + verified jobs + smart links	Weekly active businesses retained > 60%; the phrase “Atwe answers my customers at night” heard in the wild
H1 2027	CRM-lite + team inbox + call recording/notes + Android + ID verification	Multi-seat businesses; Atwe as the operating tool, not just the presence
H2 2027	Public API + targeted ads v2 + commerce fees + Atwe Card decision	Revenue diversified across Pro, ads and commerce; platform-economics story credible

Five moats to press

Where Atwe is structurally hard to copy — press these on purpose, in product and in marketing.

1 · Escrow-grade trust

Buyer protection, disputes, refunds, a trust score, an admin bank-office — strangers can transact safely on day one. Marketplaces live and die here; Atwe launched with it. **Press:** put “Protected by Atwe escrow” on every surface, make it the tagline of commerce.

2 · Commerce inside conversation

Quote → invoice → payment → order → review without leaving the thread; cart-recovery through chat. WhatsApp has pieces regionally; nobody has the whole chain. **Press:** the “close the deal in the chat” demo is the sales pitch.

3 · Industry circles

Curated, official, joinable industry feeds — the anti-noise. A trade can have a national newspaper on day one. **Press:** seed the top 20 circles with real content weekly; they are the acquisition surface.

4 · The one-graph advantage

Followers = customers = applicants = buyers. Every feature launched enriches the same graph, so each new feature is cheaper and stronger than a rival's standalone. **Press:** build features that need two personas (referral asks, team seats, affiliate) — they compound fastest.

5 · An AI with hands, not just words

The audit's 22% AI score is the plan, not the ceiling: memory + briefing + receptionist + analyst on top of an already-acting agent, grounded in the member's REAL data — posts, chats, orders, money. Generic chatbots can't follow you there. **Press:** every AI feature must touch real business data or take a real action; chat-only AI is table stakes.

The launch playbook

Concrete, founder-sized moves for the next two quarters — no headcount assumed beyond you + the AI.

Seeding (weeks 1–4)

- **Hand-onboard 20 lighthouse businesses** you personally know — complete profiles, storefronts, first posts. Concierge them; their success stories are the marketing.
- **Seed the top circles** with 3 quality posts/week each (curation counts); pin the best community threads.
- **Turn on the referral program loudly** — both-sides wallet credit is already built; make it the signup's second screen.

Positioning (continuous)

- One message: **“Run your business from one app.”** Demo the loop (post → chat → escrow order → review) in a 45-second video — that's the ad.
- Publish the **trust page**: escrow, disputes, honest privacy, appeals. Business owners read that page before depositing money.
- Let the **iOS TestFlight ring** be a status symbol: invite lighthouse businesses first, ask each for one piece of feedback per build.

Measurement (from day one)

- North star: **weekly businesses with ≥1 real customer interaction** (message, order, booking, applicant) — not registrations.
- Watch the admin growth panel weekly: DAU/WAU/MAU and stickiness are already instrumented; feed-signal lift tells you if For You is working.
- Interview 5 members per week from inside Beam — the product IS the research channel.

The discipline: nothing new ships in a launch quarter except NOW items and fixes the lighthouse businesses ask for twice. Every “wouldn't it be cool” goes to Part 5's blank lines instead.

Fresh ideas beyond the lists

Not in any audit — original moves that fit Atwe’s shape. Treat as sparks, not commitments.

IDEA	WHAT IT COULD BE
Atwe Storefront QR kit	A printable counter-card (QR → storefront + review link + follow) generated from the profile — the offline-to-online bridge every local shop needs. Tiny build; big habit-former.
Circle Pulse	A weekly AI-written digest per industry circle (“what Construction talked about this week”) — emailed and posted. Makes circles feel alive even before they’re huge; showcases the AI.
Deal Rooms	A group + Group Cloud + escrow milestone payments packaged as one “project room” for contractor-style jobs — quote in, milestones out, files and approvals in the middle. Mostly existing pieces, one new wrapper.
Atwe Receipts	Every wallet/order payment can render a beautiful branded receipt page (shareable link) — free marketing on every transaction, and the anchor for future accounting exports.
Hiring Day events	An event type where a business books slots and applicants reserve interviews — events + appointments + jobs composed into a distinctly-Atwe ritual.
Trust passport	A public, linkable page per business: verification level, trust score, review summary, dispute rate. Businesses put it in email signatures; Atwe becomes the credibility registry.
Seasonal storefront modes	One-tap holiday/sale dressing for storefronts (banner + badge + countdown) — merchandising energy with zero design skill required.
Voice-first field mode	For workers on job sites: a big-button, voice-note-first Beam layout with AI transcription doing the typing. Nobody serves gloves-on users; Atwe’s trades audience wears gloves.
Apprentice mode	Courses + jobs composed: a business publishes a paid training path that ends in a hire — education with a job at the end is a category of one.
Local bundles	Neighboring businesses co-sell (“coffee + florist Mother’s Day bundle”) using the existing bundle rails across sellers — commerce that behaves like community.

Risks to manage honestly

Every strong plan names its failure modes. These are Atwe's, with the mitigations already in hand.

RISK	REALITY	MITIGATION
Cold start	Marketplaces are empty until they aren't; 400 features don't fix an empty room.	The wedge plan (6.1), lighthouse concierge, demo mode for showcases, circles as content surface, referral credits.
Focus dilution	The very breadth that impresses can scatter a one-founder roadmap.	This book: NOW list discipline, blank-lines parking lot, quarterly re-read of Part 5.
Single-operator bus factor	One founder + AI runs the whole thing today.	The admin RBAC and this documentation exist precisely so help can onboard fast; hire the first ops/support person before public scale.
Infrastructure ceilings	Base64 media in Postgres and single-node realtime were right for v1, not for virality.	Named NOW items: object storage + CDN, then Redis-backed scale-out — both planned before they're urgent.
Money = regulation	Wallets, escrow and payouts attract compliance duty as volume grows.	Stripe rails carry KYC today; the ledger, audit log and data-request trail are already regulator-shaped. Get counsel before the Card launches.
Platform dependence	Apple review, Stripe policy, model-provider pricing can each surprise.	PWA remains a first-class fallback; billing degrades gracefully by design; AI features degrade to heuristics — resilience is already a pattern.
Trust incidents	One fraud story travels farther than a hundred good ones.	Velocity caps, wallet freeze, disputes SLA, appeals, moderation AI — plus: publish the trust page and answer incidents in public, fast.

The advisor's last word: the product is no longer the risk — it's built, audited and beautiful. The next twelve months are about sequencing, seeding and staying honest under growth. This book is the instrument for all three.

07

Running the Company

The product is Parts 1–6. This part is the company around it — legal, money, geography, support, reliability and growth operations. Added after independent review so this book is the single source of truth for the business, not only the product.

Legal & compliance

Atwe holds customer money and hosts user content — the two areas regulators care most about. This page is the honest map of obligations and the posture for each. **It is a planning map, not legal advice: engage a fintech-literate attorney before public scale.**

AREA	REALITY & POSTURE
Money transmission	The wallet, escrow and custodial float can constitute money transmission (state-by-state in the US). Today's mitigations: Stripe processes all card money, payouts ride Stripe Connect (which carries its own licensing), balances are USD-only, velocity-capped (\$5,000/day · \$15,000/week) and freezable. Action: counsel opinion on the custodial wallet model before public scale; evaluate a licensed-partner structure if volume grows fast.
KYC / AML	Identity verification for payouts is delegated to Stripe Connect onboarding (KYC at cash-out — the point money exits). Internal controls already live: velocity caps, wallet freeze, fraud holds, an append-only ledger, and full audit trails. Action: document an AML policy + designate a compliance owner (the founder, initially, in writing).
Seller tax reporting	US marketplaces must issue 1099-K to sellers above the federal threshold; marketplace-facilitator laws can make Atwe the sales-tax collector in many states. The optional tax module already computes tax at checkout. Action: adopt Stripe Tax / 1099 tooling before the first high-volume seller year-end.
Platform documents	Required at public launch: Terms of Service, Privacy Policy, Community Guidelines (the moderation reasons already enumerate them), refund/escrow policy page, and a minimum-age rule — recommended 18+ (a business platform that moves money has no reason to accept minors). GDPR/CCPA request handling is already built with a deadline-tracked paper trail.
Content liability	Reports → moderation queue → appeals with due process already exist (Section 230-shaped posture in the US). DMCA agent registration is a one-form action at launch.
Corporate	ATWE INC formation completes the Apple Organization upgrade, the bank account, and the contracts entity. Action: incorporate before public launch; assign IP (code, brand, this book) to the company in writing.

Pricing & unit economics

The numbers that already exist in the code, the prices to set, and the cost side — one honest page.

Prices live in the product today

ITEM	NUMBER
Promoted post	\$2 / day (1–30 day terms)
Sponsored display ad	\$5 / day (admin-reviewed)
Sponsored listing (CPC)	10¢–\$5 bid, \$1–\$200/day budget, second-price auction
Free business job cap	3 live posts (Pro lifts it)
Loyalty points	~1% back; 100 pts = \$1
Referral bonus	\$5 each side, wallet credit
Wallet velocity caps	\$5,000/day · \$15,000/week
P2P & commerce fee	0% today — deliberate

Prices to decide (recommendations)

DECISION	RECOMMENDATION
Atwe Pro v2	\$19/mo personal-pro · \$49/mo business tier (who-viewed list, analytics depth, AI capacity, unlimited jobs, badge)
Commerce fee	0% to a seller's first \$10k GMV, then 2% — the anti-Upwork/Etsy wedge, loudly marketed
Creator-earnings share	5% on subscriptions/PPV/tickets once creator payouts pass ~\$10k/mo platform-wide

The cost side (drivers, not secrets)

COST	SHAPE
Stripe	~2.9% + 30¢ per card charge; Connect payout fees; the wallet's internal transfers cost \$0 — every balance-funded payment is pure margin headroom
AI tokens	Per-use, capped by plan; heaviest surfaces (matchmaker, scans) are batched/cached; Pro pricing is the counterweight
Hosting	Railway app + Postgres — tens of dollars/mo at current scale; the CDN project adds object-storage costs that scale with media
Shipping labels	Pass-through: seller wallet pays the carrier rate
Apple/Google	\$99 + \$25/yr accounts; 30/15% only on in-app digital purchases — physical goods, services and P2P money are exempt from app-store commission

Unit-economics sketch: a subscribed business at \$49/mo with \$2k monthly GMV at 2% (post-threshold) + \$30 ads ≈ **\$119/mo revenue** against single-digit dollars of direct cost — a >90% contribution margin once the network exists. The strategy stays: **trust first, fees after volume** (\$1.6, \$6.1).

Launch geography

Stated plainly for the first time: **Atwe launches United-States-first**. Not by accident — by dependency.

DEPENDENCY	WHY US-FIRST
Money rails	Stripe Checkout + Connect payouts, USD, US bank cash-outs — the entire wallet/escrow stack is US-ready today. Each new country = payout support + currency + tax + KYC review.
Tax & compliance	1099-K and marketplace-facilitator rules are US frameworks already accounted for in §7.1; each jurisdiction adds its own.
Commerce logistics	Shipping labels (Shippo) and carrier tracking links are US-carrier-first.
Language readiness	The UI already ships 14 languages with RTL — so immigrant-owned US businesses are first-class on day one , and international expansion is a compliance project, not a rebuild.

The expansion path (when the US wedge is proven)

- **Wave 1 — Canada & UK:** Stripe-native, English-first, minimal product change; add CAD/GBP display (multi-currency is already a LATER roadmap item).
- **Wave 2 — EU:** GDPR posture already built (data requests, export, deletion); needs VAT handling + local payout review.
- **Wave 3 — Israel & LATAM:** the RTL investment and Spanish/Portuguese UI pay off; payout rails decide timing.
- **Rule:** a country opens when **payouts + taxes + support language** are all answered — never marketing-first.

Non-US signups before then: allowed to browse and network (the network is global by nature), with wallet/commerce gated by country until each corridor is certified — honest gating over silent failure.

The member-support system

When Sarah's payout fails, that moment decides whether Atwe keeps her. Support is a money-trust feature. Much of the machinery already exists — this page turns it into a system with owners and response promises.

Already built (Part 4 recap)

- **Help & refunds** surface in-app: refund requests validated against real payments, staff-reviewed.
- **Admin Support tab** + reports queue with bulk actions; **appeals** with due process from the login screen.
- **Disputes** (escrow) with an SLA countdown; **“view as user”** logged impersonation to reproduce issues.
- **Data-request** paper trail (GDPR/CCPA) with deadlines.

Being added (\$5.8 · NOW)

- **Help center** — self-serve articles for the top 30 questions (start from real Beam questions).
- **In-app tickets** — “Contact support” files into the admin Support tab with status + notification on reply.

The service promises (set now, honor always)

CHANNEL	PROMISE
Money issues payout fails, escrow, refunds	First response < 4 business hours; resolution or a dated plan < 48h — the disputes SLA is already instrumented
Account & safety	< 24h; suspensions always route to the appeal flow
General “how do I”	< 48h; every answer becomes a help-center article

The addresses, as a routing system

support@atwe.com	→ tickets (the queue of record)
alerts@atwe.com	→ outbound only: system + security notices
team@atwe.com	→ partnerships & business development
ceo@atwe.com	→ the founder; escalations of last resort

Staffing reality: at launch the founder is support — fine, if the queue, the promises and the macros exist. The **first hire** (\$7.6) takes this queue over.

Reliability — backups & incidents

A platform holding money earns trust in its worst hour. The stack is small enough to protect completely — this is the plan.

AREA	POSTURE
Database backups	Railway-managed Postgres provides automated backups. Actions: verify the schedule + retention in the dashboard, enable point-in-time recovery if offered, and run one restore drill per quarter — a backup that has never been restored is a hope, not a plan. The money ledger is append-only, which makes any restore reconcilable.
Code & documents	Everything lives in GitHub (app, admin, iOS app, this book, the audits). The repo IS the disaster copy of the company's brain.
Media	Today media lives inside Postgres (so it's inside the DB backup). The CDN/object-storage project (NOW) moves it out — its plan must include bucket versioning + replication from day one.
Status page	Add a public status.atwe.com (hosted status service) wired to the existing /api/health check — honest downtime beats silent downtime. NOW, one afternoon.
Incident runbook	One page in the repo: sev levels, who acts (founder), the kill-switches that already exist (feature flags can disable signups/posting/wallet/Al live, wallet freeze, session revoke), and the comms templates (status page + alerts@). The background-job health panel already watches the money flushers.
Card chargebacks	Stripe handles card disputes; evidence comes from what Atwe already stores — the order timeline, chat thread, tracking, escrow states. Action: a short internal playbook for responding within Stripe's deadlines; monitor the rate (<0.75% keeps processors happy).
Security response	Sessions are revocable platform-wide; secrets rotate in Railway; the audit log + activity firehose provide forensics. Action: publish a security.txt + a responsible-disclosure email.

Growth operations — SEO & the first hires

The last two reviewer gaps, answered.

SEO — the organic engine

- **The plumbing already exists:** public profile deep-links (the signed-out “peek”), rich OG link previews, an SPA catch-all — search engines and link unfurls already get real pages.
- **Make every business a landing page:** server-render title/description for profile peeks (largely done via OG), add sitemap.xml + structured data (LocalBusiness, Product, JobPosting schemas) — **jobs and products are Google's favorite structured content.**
- **The content flywheel:** Circle Pulse digests (§6.4) become public weekly industry pages — fresh, keyword-rich, honest content with zero writing burden.
- **Measure:** the traffic analytics panel already tracks visitors by geography — watch organic share weekly.

The first hires — in order

#	ROLE	WHEN
1	Support & community ops — owns the ticket queue, moderation, circle seeding; the admin RBAC already scopes their access safely	At public traction (~500 weekly-active businesses)
2	Full-stack engineer — owns reliability + the CDN/scale projects; this book + CLAUDE.md are the onboarding	When revenue covers it
3	Growth / partnerships — lighthouse businesses, circles, local associations	After the wedge proves

Bus-factor note (from §6.5), now with a plan: the admin console's scoped staff roles, the documented codebase, and this book exist precisely so each hire is productive in days, not months. Hire #1 halves the founder's operational load — schedule it before burnout, not after.

With Part 7, this book covers the whole company — the product, the design, the plan, and the operation. [Final edition.](#)

The numbers

5 worlds — Home · Beam · Engine · Atwe AI · Profile	230+ member-facing features live (Part 4)	425 competitor features audited against the code
218 audit items complete or shipped-differently	107 roadmap items catalogued in Part 5	~470 API endpoints on the live backend
60+ database tables behind the product	14 UI languages, with full RTL	2 themes — Black flagship + Light
12 design definition-of-done checkpoints	7 iOS phases from foundation to App Store	5 revenue streams built into the platform

Documents this book absorbs

- **The Design Blueprint — Complete Edition** (24 pp): the normative UX/UI specification. Where any older mock disagrees, the blueprint wins; where prose disagrees with this book, the blueprint still wins on design.
- **ATWE — Complete Product & Feature Audit** (41 pp): the enterprise audit — status, evidence and files for all 425 items.
- **ATWE — Competitor Feature Audit, Expanded** (33 pp): the 13-platform checklist with per-item Have/Need/Skip boxes.
- **ATWE — iOS Architecture & Build Plan** (10 pp): the native-app decisions, structure and phases.

Technology at a glance

Deliberately boring where it should be, sophisticated where it pays. Everything degrades gracefully — no optional integration can crash the platform.

LAYER	CHOICE
Backend	Node.js + Express — one composition root; PostgreSQL with idempotent self-bootstrapping schema; JWT auth over a revocable session store.
Realtime	Server-sent events, one stream per device; web push (VAPID) for closed-app delivery.
Web frontend	A self-contained installable PWA — vanilla JS, zero build step, network-first service worker.
Native apps	Expo (React Native) + TypeScript + Expo Router; TanStack Query; Keychain secure store; EAS cloud builds → TestFlight/App Store; Android from the same code.
Money	Stripe (checkout, subscriptions, Connect payouts) over an internal zero-sum ledger with idempotency, velocity caps and an automated money test-suite.
AI	Anthropic models behind the Atwe AI brand — chat, writing tasks, ranking, moderation, agent tools with confirm gates; heuristic fallbacks with no key.
Optional services	SMTP mail, web push, geo-IP, market data, speech-to-text, Shippo labels, Tenor GIFs — each isolated, each optional.
Ops	Railway hosting; admin console with RBAC, audit log, feature flags, job health; demo-mode seeding for showcases.

Scale posture: the two named ceilings (media in Postgres; single-node realtime) have named cures in Part 5 — object storage + CDN, then Redis-backed fan-out — scheduled before they hurt.

Contact & colophon

This book was produced for ATWE INC as the master reference for the Atwe platform — synthesizing the live codebase, the Design Blueprint (Complete Edition), the Complete Product & Feature Audit, the Expanded Competitor Audit, the iOS Architecture & Build Plan, and the founder's full vision. It is confidential and intended for internal, advisor and partner use.
